Hi Colin,

I've attached the updated file with the adjusted timeframe you requested. Due to the low number of records, we are concerned that even a separate list of surgeries and scans could identify individuals.

Kind regards,

Michael

95K

The Alberta Wait Times Reporting (AWTR) application captures wait time information for Albertans. A wait time measure is the time between the decision date (the date a patient and specialist decide that a service is required) and the date the procedure or test is performed.

For the fiscal period of April 1, 2021 to April 1, 2022, there were 127 people marked as deceased while waiting for a diagnostic or surgical event.

What is not accounted for, and can impact this data, are the people that may have had other criteria that had to be met prior to completion. This would impact the length of time they are waiting.

Identifying information is not provided due to low numbers and the potential to identify an individual.

DECISION_DATE	DATE_OFF	DATE_SCHEDULED	DAYS_WAITED	TYPE
