Dear Kristen:

Re: Full Disclosure – OUR FILE# NSHA-2023-144

On May 2, 2023, Nova Scotia Health (NSH) received your request under the *Freedom of Information and Protection of Privacy Act (FOIPOP Act)*.

We understand your application to be for a copy of the following:

Please provide data on the number of patients that died while on a waiting list for surgery or a procedure in fiscal year 2022-23. Please break the data out by surgery/procedure and case information – date the patient was referred to a specialist, decision date, date for the procedure, and date of cancellation. Please also note the government's target time for providing the procedure in question. Note: Many hospitals/ health regions were able to identify such cases as they track the reason for cancelled operations.)

Please find a copy of the records located in response to your request. We are providing these records to you in their entirety.

We are now closing your file.

Should you have any questions, please do not hesitate to contact me.

You have the right to seek a review with the Review Officer within 60 days of receiving this decision. Complete details of the process are outlined on the website of the Office of the Information & Privacy Commissioner: <https://foipop.ns.ca/request-a-review>.

Sincerely,
Katie Smith
Freedom of Information Officer
Nova Scotia Health Authority
Halifax, Nova Scotia

Response to Foipop Request: *Please provide data on the number of patients that died while on a waiting list for a surgical procedure in fiscal year 22-23. Please provide data separated by procedure and note the government's target time for providing the procedure in question.*

In the attached dataset we can see that 532 patients died while waiting for surgery among over 23,000 patients who were on the waiting list for surgery during the fiscal year 2022/2023. This is a consistent figure over the past several years. 91% of deaths occurred in patients awaiting procedures that would not be anticipated to change the probability of death. For example, 172 deaths (32% of all deaths on the waitlist) occurred among patients awaiting cataract surgery. Other examples of procedures not anticipated to be implicated in mortality include cystoscopy; orthopaedic procedures for arthritis; dental surgery; and other procedures that do not involve either cancer treatment or cardiovascular procedures. Fifty deaths on the waiting list involved procedures where delays in treatment might reasonably be implicated causally. Among these are bowel resections; cancer resections and coronary artery bypass surgery. Among these, 19 patients were waiting beyond the recommended wait times for the procedure in question. At this point we do not have precise data around cause of death for these patients and cannot comment on the probability of death avoidance if surgery were performed.

It is worthwhile noting that this data is based on our PARNs booking system and there are sometimes patients inappropriately left on the system even though a decision has been made by patient and surgeon not to pursue surgery, thus the mortality rate among those waiting may be falsely high. For example, 36 patients who died may well represent patients no longer actively awaiting the procedure in question.

Finally, the mortality rate in Nova Scotia is generally just over one percent while the mortality rate among those queued for surgery is about 2.3%. The average age of patients waiting for surgery is considerably higher than the average age in Nova Scotia which is 46, such that the death rate among patients waiting for surgery may be very close to that of an age matched group of Nova Scotians.
